

An aerial photograph of a river winding through a landscape, with a road and some structures visible. The image is in a blue-tinted, high-contrast style.

GEOG370 007

Introduction to Geographic Information

Spring 2024
MW 3:35-4:50pm
CH 220

The human and natural systems in our planet are changing at a fast pace. We need to collect and analyze pertinent data on a timely basis to understand these changes and assess their effects. This course will cover a survey of geographic data sources, including tables, maps, photographs, digital imagery and others. Discussions and activities will cover appropriate uses, limitations, and interpretation of these different data sources in physical and human geography applications.
